

## vifabio – A virtual guide to libraries and the internet for biologists

Gerwin Kasperek, Judith Dähne, Jashar Rexhepi & Berndt Dugall

Universitätsbibliothek Johann Christian Senckenberg, Frankfurt am Main

**Abstract:** Die Virtuelle Fachbibliothek Biologie (vifabio) bietet einen zentralen Sucheingang zu Literatur und biologischer Fachinformation in Bibliotheken und Internet. Die wesentlichen Inhalte dieses Fachportals werden vorgestellt. Dabei wird auf entomologisch relevante Inhalte hingewiesen. Der Virtuelle Katalog ermöglicht es, die Fachkataloge biologischer Bibliotheken, mehrere Aufsatzdatenbanken sowie den Internetquellen-Führer von vifabio parallel zu durchsuchen. Der Internetquellen-Führer bietet qualitätskontrollierte Links zu biologischen Web-Angeboten, Portalen und Datenbanken sowie zu Web-Auftritten von Institutionen und Fachgesellschaften. Ein spezieller Datenbank-Führer unterstützt die Benutzer, unter mehr als 500 Datenbanken die „richtige“ zu finden.

**Keywords:** literatur retrieval, scientific literature, digital library, Literaturrecherche, Fachliteratur, Digitale Bibliothek

### Introduction

The Virtual Library of Biology – vifabio – has been established as a biological information portal for research, teaching and study. This ongoing project is conducted by the University Library Johann Christian Senckenberg, Frankfurt/Main with several partner institutions, among them the DEI (Deutsches Entomologisches Institut). The comprehensive holdings of biological literature of the special subject collection Biology, Botany, Zoology, supported by the DFG, form the basis of the content of vifabio. The project's objective is to create a central access point to various resources for biologists, such as printed materials in libraries, databases and internet sites. The vifabio website was launched in 2007 (<http://www.vifabio.de/>); most of the content is available both in English and in German language. The core elements of vifabio are:

### Virtual Catalogue

The Virtual Catalogue of Biology integrates libraries with important holdings of biological literature for parallel search. Thereby, vast collections of zoological books and journals are retrievable. The Biodiversity Heritage Library enlarges the Virtual Catalogue to cover digitalised taxonomic literature. In addition, article databases with data from several million journal articles have been integrated – document supply service or the electronic full texts being just a few clicks away. Some of the features of the user interface (Fig. 1) are:

- an option to customise target libraries and databases (by checking the boxes on the right-hand side),
- the bookmark list (to be reached via a tab above the search form) which allows users to save search results for printing or downloading them afterwards, and
- additional information on libraries and databases (via the “i” = info symbols)

### Internet Guide

The Internet Guide is a collection of quality-checked links to biological internet resources. Access is provided via search tools, as well as via browsing through multiple alternative systems of resource arrangement (e.g. subjects/themes, geographic coverage, resource type). As of March 2009, 1,600+ internet sites have been checked and catalogued, with more to come. Availability of hyperlinked resources is monitored automatically to avoid broken links.

- Users can easily browse through subject trees (example: <http://tinyurl.com/cm7sn9>).
- Important facts about resources (including abstracts and classification) are shown immediately; even more detailed information is at hand (by clicking on “more...”).

**Reset Choice**

**Virtual Catalogue - Search hints:**

- Type your search term in one of the empty boxes.
- You are not obliged to fill in all the boxes.
- It is possible to combine several search boxes ("author" and "title"). Multiple terms in a search field will be regarded as a phrase.
- The truncation sign is "\*" (words are not automatically truncated): "ant\*" retrieves "ants", "ant-eater".
- Names in the author's box should be specified as such "Darwin, Charles".

**All catalogues & Databases**

- UB Frankfurt Fachkatalog Biologie
- UB Frankfurt Retrokatalog
- BGBM & Biologie FU Berlin
- IPK Gatersleben
- Marine fisheries SUB Hamburg
- Biodiversity Heritage Library

**Bibliographic databases**

- Catalogue of articles (OLC)
- BioLIS
- PubMed

**Internet resources**

- Internet Guide

**German regional bibliographies**

- Hessische Bibliographie

**Electronic Journals**

- Electronic Journals Biology (EZB)

## BioLib

In cooperation with Kurt Stüber’s BioLib, digitised versions of historic biology books are now available as PDF files. There are several ways of finding these historical books: via our Virtual Catalogue of biology, via [www.BioLib.de](http://www.BioLib.de), or via searching / browsing the repository. As of December 2008, users can view and download about 300 titles, among them many historic entomology books. They are available as PDFs of various file sizes (with respect to bandwidth).

## Online databases

Providing various ways of access to biological databases is a major goal in vifabio (fig. 2). An inventory of important online databases for biologists provides access via searching and browsing. This collection comprises bibliographical databases as well as factual and pictorial databases for all sub-disciplines of biology. Users can find more than 500 freely available databases (complete listing: <http://tinyurl.com/dcezpj>). DFG-funded licences permit nationwide usage of some bibliographic databases, for example, Biological Abstracts 1926-2004 (for German universities / residents only).

## Additional features

Convenient access to electronic journals is enabled through the Electronic Journals Library (EZB), with its familiar traffic lights indicating existing licences at the user’s current place of work. Lists of new acquisitions of vifabio’s partner libraries are provided (<http://www.vifabio.de/about/ne/vifabio-ne.html>), as well as links to job advertisements, calendar of events and other services. Further enhancements of vifabio will include improved search tools, and improved linking features to electronic full-texts as well as integration of more bibliographic databases into the virtual catalogue. A repository for electronic documents, to be established as part of vifabio, shall provide a platform for open access publication.

The screenshot shows the homepage of the vifabio website. At the top, there's a navigation bar with links for Home, About vifabio, Sitemap, Contact, Help & Advice, and a search icon. The main header is "Biological Online Databases". Below the header, there's a section titled "The Virtual Library of Biology provides various ways of access to biological databases:" followed by a bulleted list of resources. To the left, there's a sidebar with links for Virtual Catalogue, Internet Guide, E-Journals, Databases, and Other, along with a "Darwinjahr 2009" link. On the right, there are news items about Biodiversity Heritage Library and pay-per-use options for Biological Abstracts and Zoological Record. At the bottom, there's a footer with copyright information and links to FIND'SI and Imprint.
